# Low Fidelity Wireframes

For my lo-fi wireframes, I aimed to stay as close to my original site's structures as possible.
I adopted a hero banner, with big headers and possible background images for the title section.
For the content sections, I adopted a grid-like alignment for readability, and grouped elements
with similar function/information, such as the product details and the remove button.
I placed the total price at the bottom in bold to make it stand out, and added two buttons for
convenience - one to quickly checkout, and one to return to the product shopping page. In
addition, I added a message ("Oh no! Cart is empty :(") that shows up when the cart is empty, to
prompt users to add more items to their carts.
